## BASIC-ABSTRACT:

An activator for the function of sebaceous gland comprises active agent of crude drugs having anti-diuresis activity or anti-perspiration activity.

Solvents used to extract the crude drugs are, e.g. ethanol, acetone, methanol, ethylenechloride, petroleum benzene, water; etc. Water and ether are pref. for safety; ethyl ether is partic. pref. for solvent removal. These solvents can be used independently or at least two of them can be used in combination. The plant contg. the crude drug is cut into small pieces and water 2-3 times as much as the amt. of the cut plant, 50-95% ethyl alcohol or ether are added to the plant. It is steeped in the soln. for 48-72 hrs. at 40 deg.C. Then steeping soln. is filtered and the filtrate is allowed to stand overnight at not more than 5 deg.C and then it is filtered again. The soln. is condensed under reduced pressure or the solvent contained in the soln. is completely distilled off to obtain the crude drug. It may be formed into tablets, granules, capsules, etc. The depressor is pref. administered by oral route. The amt. of the depressor administered is at least 1.5 mg/100 g of body wt.

USE/ADVANTAGE - The activator can improve the secretion of sebum cutaneous. It can

be applied to symptoms caused by hyposecretion of sebum cutaneous.
